
OpenStack-Ansible Documentation:

os_mistral role

Release 0.1.0.dev113

OpenStack-Ansible Contributors

Mar 28, 2024

CONTENTS

1	Default variables	3
2	Example playbook	9
3	External Restart Hooks	11
4	Tags	13

This role installs the following Systemd services:

- mistral-api
- mistral-engine
- mistral-executor
- mistral-notifier

To clone or view the source code for this repository, visit the role repository for [os_mistral](#).

DEFAULT VARIABLES

```
# Installation method
mistral_install_method: "{{ service_install_method | default('source') }}"
mistral_venv_python_executable: "{{ openstack_venv_python_executable |
↳default('python3') }}"

# Operating system user & groups
mistral_system_user_name: mistral
mistral_system_group_name: mistral
mistral_system_shell: /sbin/nologin
mistral_system_comment: Mistral Daemons
mistral_system_user_home: /var/lib/mistral

# Distribution deployment
mistral_package_state: "{{ package_state | default('latest') }}"

# Source package builds
mistral_git_repo: https://opendev.org/openstack/mistral
mistral_git_install_branch: master
mistral_extra_git_repo: https://opendev.org/openstack/mistral-extra
mistral_extra_git_install_branch: master
mistral_upper_constraints_url: "{{ requirements_git_url | default('https://
↳releases.openstack.org/constraints/upper/' ~ requirements_git_install_
↳branch | default('master')) }}"
mistral_git_constraints:
  - "--constraint {{ mistral_upper_constraints_url }}"
mistral_pip_packages:
  - "git+{{ mistral_git_repo }}@{{ mistral_git_install_branch }}#egg=mistral"
  - "git+{{ mistral_extra_git_repo }}@{{ mistral_extra_git_install_branch }}
↳#egg=mistral-extra"
  - PyMySQL
  - pymemcache
  - python-memcached
  - systemd-python

mistral_optional_oslomsg_amqp1_pip_packages:
  - oslo.messaging[amqp1]
mistral_venv_tag: "{{ venv_tag | default('untagged') }}"
mistral_bin: "{{ _mistral_bin }}"
```

```

EXAMPLE PLAYBOOK

```
---  
- name: Install mistral server  
  hosts: mistral_all  
  user: root  
  roles:  
    - { role: "os_mistral", tags: [ "os-mistral" ] }
```

EXTERNAL RESTART HOOKS

When the role performs a restart of the service, it will notify an Ansible handler named `Manage LB`, which is a noop within this role. In the playbook, other roles may be loaded before and after this role which will implement Ansible handler listeners for `Manage LB`, allowing external roles to manage the load balancer endpoints responsible for sending traffic to the servers being restarted by marking them in maintenance or active mode, draining sessions, etc. For an example implementation, please reference the [ansible-haproxy-endpoints](#) role used by the `openstack-ansible` project.

**CHAPTER
FOUR**

TAGS

This role supports two tags: `mistral-install` and `mistral-config`. The `mistral-install` tag can be used to install and upgrade. The `mistral-config` tag can be used to manage configuration.
